Professional Experience

PT. Bigs Integrasi Teknologi - Mobile Developer Intern Mar 2026 – Jul 2026

Technology company developing healthcare software.

• Developed a Flutter-based vehicle inspection application, digitizing inspection workflows from document verification to physical vehicle assessment for a software solutions company. .

• Built 5+ inspection modules covering OCR-based document verification, vehicle documents, interior, exterior, engine & transmission, and undercarriage components, enabling inspectors to record structured inspection results digitally.

• Integrated REST APIs with the Flutter application for authentication, task management, dashboard data, and inspection submissions, ensuring consistent data exchange between mobile and backend services.

• Collaborated with backend developers to troubleshoot API integration issues and implement reusable UI components, improving application consistency and supporting a maintainable mobile architecture.

PT. Visiontech Indograha - Software Engineering Intern Aug 2025 – Dec 2025

Security systems and IT solutions.

• Developed web and mobile applications across the software development lifecycle, contributing to frontend, backend, and Flutter-based mobile features.

• Designed and improved UI/UX for web and mobile applications, translating user requirements into responsive and user-focused interfaces.

• Integrated REST APIs and SQL Server databases to support dynamic data processing and communication between application components.

MI Muhammadiyah 02 Pekanbaru - Frontend Developer Intern Jul 2021 – Nov 2021

Muhammadiyah-based Islamic elementary school.

• Updated the user interface of a desktop-based student tuition fee management application, improving its visual consistency and usability.

• Managed and maintained application interfaces for student financial administration, ensuring the system remained functional and aligned with administrative needs.

• Collaborated with school staff to identify UI requirements and implement interface improvements based on their operational workflow.

Education

Politeknik Caltex Riau - B. Eng in Informatics Sep 2022 - Oct 2026

• **CGPA**: **3.67/4.00**

Projects & Achievements

Modul Pemeliharaan Alat Proteksi Kebakaran May 2025 - Jul 2026

Mobile Application · Flutter · MySQL · QR Code.

• Developed a Flutter-based mobile application to digitize periodic maintenance and inspection of fire protection equipment, including equipment condition, expiration dates, pressure, and nozzle checks.

• Implemented QR Code scanning to identify equipment and streamline the inspection process, reducing manual data lookup during field inspections.

• Designed the application interface and inspection workflow to support structured equipment records and facilitate efficient field maintenance activities.

Deep Learning Cat Classification Using CNN Mar 2025 - May 2025

Python · TensorFlow/Keras · MobileNetV2 · Flask · Tailwind CSS.

• Built a web-based cat breed classification application using a Convolutional Neural Network (CNN) to classify images across multiple cat breeds.

• Trained and fine-tuned a MobileNetV2 model on a cat breed image dataset, developing an image classification pipeline for model training and inference.

• Deployed the trained deep learning model into a Flask-based web application, enabling users to upload cat images and receive classification results through an interactive interface.

Deep Learning Cat Classification Using CNN Sep 2024 - Jan 2025

Mobile Development · Kotlin · Firebase · Machine Learning.

• Developed a Kotlin-based mobile application for daily retail operations, enabling users to manage product inventory, stock additions, and sales transactions.

• Implemented inventory management features to track product availability and stock changes throughout the sales process.

• Integrated a machine learning component to classify and predict product sales performance, helping identify fast-moving and low-performing products.

• Utilized Firebase for backend services and data management, supporting dynamic synchronization between the mobile application and its data layer.

School Digital Display Board Mar 2024 - Jul 2024

Full-Stack Development · Laravel · MySQL · PHP.

• Developed a full-stack digital display website to present daily class schedules, subjects, and assigned teachers on school television displays.
• Built an admin interface for managing schedule and school announcement data, enabling administrators to update displayed information without modifying the application directly.
• Implemented a dynamic public display that automatically presents updated schedules and school announcements for students and teachers.
• Utilized Firebase for backend services and data management, supporting dynamic synchronization between the mobile application and its data layer.

Inclusive Entrepreneurship & Employment Platform Sep 2023 - Dec 2024

UI/UX Design · Figma · Prototyping

• Designed a Figma-based UI/UX prototype for a digital platform connecting job seekers with UMKM employment opportunities in Pekanbaru.
• Designed user flows for job discovery, workplace selection, and job applications, enabling users to explore nearby employment opportunities through an interactive interface.
• Applied user-centered design principles to create an intuitive experience for both job seekers and UMKM owners.

Cafe Inventory Management Website Nov 2023 - Dec 2023

Full-Stack Development · Laravel · PHP · MySQL.

• Developed a Laravel-based inventory management website to digitize manual stock recording for a cafe.
• Implemented features for managing incoming stock and outgoing/sold inventory, enabling more structured and centralized stock tracking.
• Built date-based sales and revenue reports from inventory transactions, allowing users to review cafe performance through organized records.
• Integrated MySQL as the database layer to manage product, inventory, and transaction data.

Student Achievement Management System Mar 2023 - Jul 2023

Frontend Development · UI Design

• Developed the frontend interface for a student achievement submission system, enabling students to submit and track their academic and non-academic achievements digitally.
• Designed user flows for achievement submission, review, approval, and rejection, supporting the administrative workflow of study program coordinators.
• Implemented interfaces for study program coordinators to review submitted achievements and manage their approval status before further processing for student activity points.
• Translated functional requirements into a structured and user-friendly interface, improving accessibility of the achievement submission and review process.

Skills

Languages: Bahasa Indonesia (Native), English (Professional Proficiency).
Programming: Dart, Kotlin, Python, PHP, JavaScript, SQL.
Technologies: Flutter, Laravel, Flask, Firebase, MySQL, REST API, Tailwind CSS, CNN, MobileNetV2 .
Tools & Platforms: Git/GitHub, Postman, Figma, MySQL Workbench, Android Studio
Hard Skills: Mobile, Frontend, Full-Stack, Design, API, Database, Machine Learning, Deep Learning, OCR, Debugging.
Soft Skills: Problem Solving, Teamwork, Critical Thinking, Communication, Quick Adaption.
AI-Assisted Development: Claude Code, Copilot, Antigravity, Codex.
